

AnimaNinjaSol (\$ANS) Whitepaper

1. Introduction

AnimaNinjaSol (ANS) is a new project built on the Solana blockchain. It combines anime and ninja themes with blockchain technology to create a fun and rewarding platform. Users can collect unique digital art called NFTs, use the \$ANS token for transactions, and participate in the community.

2. Project Vision

Our goal is to create a lively and interactive ecosystem on Solana where fans of anime and ninja culture can enjoy and own digital assets. The community will be able to use NFTs and \$ANS tokens to play games and help make important decisions through a DAO (Decentralized Autonomous Organization).

3. Technology

Blockchain: Solana - fast, low-cost transactions

Token Standard: SPL Token (Solana's token standard)

NFT Standard: Metaplex Smart Contracts: Written in Rust, secure and efficient
Wallets Supported: Phantom, Solflare, Sollet, and others

4. Tokenomics

Total supply: 575 million \$ANS tokens All tokens (575 million) are for sale—none are reserved for the team or held back as reserves At the start, 125 million tokens will be in circulation 50 million tokens are set aside for rewards like airdrops and events Any tokens that are not sold after the sale will be permanently destroyed (burned) to reduce supply and help maintain value

5. Ecosystem and Use Cases

NFT Marketplace: Buy, sell, and trade unique anime and ninja digital art Games: We plan to develop blockchain-based mini games and competitions in the future

DAO: Community members will have a voice in project decisions through a decentralized organization AI Platform: Launching an AI-powered platform to enrich user experience and NFT utility (see roadmap)

6. Roadmap

Q1 2025:

Launch token sale on PinkSale launchpad Apply for listing on CoinMarketCap and CoinGecko Ensure liquidity and trading pairs on decentralized exchanges (DEXs) Increase token visibility and market access through strategic marketing List \$ANS on Tier 2 centralized exchanges to broaden trading options

Q2 2025:

Launch AI-powered platform with advanced features integrating NFTs and community tools

Q3 2025:

Develop game prototypes and initiate first blockchain-based mini games Release new NFT collections

Q4 2025:

Set up DAO for community governance Expand partnerships and continue ecosystem growth

7. Token Sale and Listing Strategy

AnimaNinjaSol (\$ANS) token sale will be conducted on PinkSale, a trusted launchpad known for secure and fair token launches. The PinkSale launch ensures:

Transparent and audited sale process

Community-focused token distribution

Protection against bots and unfair trading

After the PinkSale event, the project will focus on listing \$ANS on major tracking platforms like CoinMarketCap and CoinGecko. This will:

Increase global visibility and investor awareness

Provide real-time market data and transparency

Support liquidity and price stability by creating trading pairs on popular decentralized exchanges

Our marketing and community teams will actively promote the project to attract investors and users, ensuring long-term growth and engagement.

8. Security and Compliance All smart contracts are professionally audited for security The project follows KYC (Know Your Customer) and AML (Anti-Money Laundering) rules

We will listen to the community and keep improving the project

9. Conclusion

AnimaNinjaSol is a community-driven project built on Solana that mixes anime culture with blockchain. By making all tokens available for sale and burning any unsold tokens, we aim to keep the token's supply balanced and create long-term value for holders.
